

Monu Kumar

Full Stack Developer | Gen AI Integration | Django, React & LLMs

+91 73198 11232 | roy.monu.2001@gmail.com | LinkedIn | GitHub | Portfolio

Professional Summary

AI Full Stack Developer at Reliance Jio, specializing in building scalable telecom applications using **React.js**, **Django**, and **MySQL**. Developed production-grade **RAG-based AI systems** using **LangChain**, **LLaMA 3**, **Ollama**, and **ChromaDB** to streamline telecom support operations and accelerate network fault restoration workflows.

TECHNICAL SKILLS

Generative AI & LLMs: LangChain, LangSmith, LLaMA 3, Ollama, RAG Pipelines, ChromaDB, Vector Embeddings, Structured Output Parsing

Backend Engineering: Python, Django, Django REST Framework (DRF), Redis, REST API Design, Postman

Data & Databases: MySQL, SQL, Database Schema Design, Query Optimization, Database Migrations

Frontend Development: JavaScript (ES6+), React.js, Tailwind CSS

Tools & Workflows: Git, GitHub, VS Code, Chrome DevTools

Professional Experience

Reliance Jio

Jul 2025 – Present

Full Stack Developer

Navi Mumbai, India

- Built and maintained full-stack applications using React.js, Django REST Framework, and MySQL serving telecom operations teams.
- Designed and deployed BOTx, a telecom operations chatbot, reducing dependency on manual support workflows by 80% and cutting average ticket resolution time by 40%.
- Engineered a RAG-based AI restoration guidance module using LangChain, LLaMA 3, and ChromaDB — enabling field engineers to retrieve troubleshooting procedures in seconds instead of searching physical documentation.
- Optimized critical MySQL queries, reducing average API response time by 30% for real-time operational monitoring dashboards.
- Optimized RAG pipelines by implementing LangSmith for response tracing, ensuring high-quality, accurate troubleshooting for field engineers.
- Collaborated with operations and engineering teams to streamline issue tracking and telecom ticket validation processes.

Key Projects

BOTx — Telecom Operations Chatbot | Reliance Jio

Tech Stack: React.js, Django REST Framework, MySQL, REST APIs

- Built a full-stack telecom chatbot enabling field engineers to monitor and validate site issues without manual support calls — reducing support workload by 80%.
- Automated ticket verification for fiber site status, interface health, and power levels, processing 200+ daily ticket queries through the chatbot interface.
- Wrote optimized MySQL queries to allow circle-name / site-name based ticket search, reducing lookup failures to near-zero from a prior 25% miss rate.
- Integrated real-time backend APIs and database-driven workflows, reducing average issue resolution time from 2 hours to under 30 minutes.

AI-Assisted Telecom Restoration System | Reliance Jio

Tech Stack: Python Django REST Framework React.js LangChain LangSmith Ollama LLaMA 3 ChromaDB MySQL

- Enhanced a rule-based telecom operations system by developing an AI-assisted restoration guidance module for field engineers.
- Added a dedicated restoration workflow section in the application sidebar to help users access troubleshooting and restoration procedures for telecom faults.
- Implemented a RAG-based retrieval pipeline using LangChain, Ollama, and LLaMA 3 to provide restoration guidance for issues such as fiber cuts, SFP failures, and patch cord faults.
- Used ChromaDB for vector-based retrieval of telecom restoration documents and operational procedures.
- Reduced fault resolution time by 60% via a retrieval system with sub-5-second response times.

Education

RMD Sinhgad School of Engineering

Pune, Maharashtra

B.Tech in Electronics & Telecommunication Engineering (CGPA: 8.5/10.0)

May 2024
